The Symposium on Environmental Engineering (SEE), organized in the scope of the 4<sup>th</sup> Doctoral Congress in Engineering (DCE21), was hosted at the Faculty of Engineering of the University of Porto (FEUP), Portugal, on June 28<sup>th</sup> and 29<sup>th</sup>, 2021. This event was organized in virtual mode by Ph.D. students of the Doctoral Program in Environmental Engineering (PDEA) at FEUP, with the support of their professors. A book of abstracts was published gathering all the SEE-related information (ISBN: 978-972-752-280-4). The SEE covered multidisciplinary themes, with 26 oral and 40 poster presentations comprising a wide range of topics within the United Nations Sustainable Development Goals (SDGs):

- Clean Water: Emerging Pollutants, Monitoring, and Treatment;
- Air Quality: Emissions, Assessment and Health Safety;
- Waste Management and Circular Economy;
- Energy, Sustainability and Innovation: Products, Technologies, and Climate Change Mitigation.

In this edition, the SEE reached a record number of abstract submissions and registrations with more than 100 participants, including a representative number of international participants from Angola, Brazil, Colombia, Cyprus, Greece, Hungary, Luxembourg, and Spain. After going through a peer-review process, 5 papers were accepted for publication in this Special Issue. We take this opportunity to once again acknowledge all authors for their contributions, the keynote speakers with relevant lectures on emergent topics covered by environmental engineering, the Scientific Committee, and the SEE sponsors: R&D Units LEPABE, LSRE-LCM, and CERENA, and the course of Environmental Engineering at FEUP. The Editors also wish to thank the team of the FEUP library, especially Luís Miguel Costa and Palmira Seixas, for the excellent support to prepare this special issue.

June 2022

The Editors, Adrián M.T. Silva and Arminda Alves.
